

New Year Message of Prof. Dejan Raković

The paradigm of quantum physics enables us to broaden our foundation for truth and worldview – and explain and include phenomena and insights that have hitherto been ignored or denied, because they did not fit into the classical (in many aspects mechanistic) scientific paradigm. It conceptually provides more inclusive or *holistic* view which can lead to profound or 'paradigmatic' change in any field, and in our society at large – as widely argued within one-day *QIM 2011 Round table Knowledge Federation Dialog Belgrade 2011: Partial & Holistic-Oriented Approaches*, held in Belgrade, 25 September 2011, with critical consideration of partial and holistic-oriented approaches to physics and engineering, medicine and biology, psychology and transpersonal phenomena, art and philosophy, society and religion. In particular, contemporary experiences and investigations of holistic approaches and techniques based on acupuncture and consciousness, suggest wider quantum-informational framework for better understanding of the nature of psychosomatic diseases as well as limitations of the healing methods, which might help in developing strategies for psychosomatic integrative medicine in the 21st century – as widely argued within three-day *Symposium of Quantum-Informational Medicine QIM 2011: Acupuncture-Based & Consciousness-Based Holistic Approaches & Techniques*, held in Belgrade, 23-25 September 2011. More details can be found on the website www.qim2011.org.

To all followers of holistics I wish healthy and productive New Year.

Prof. Dr. Dejan Raković
